

Westinghouse

MANUFACTURING

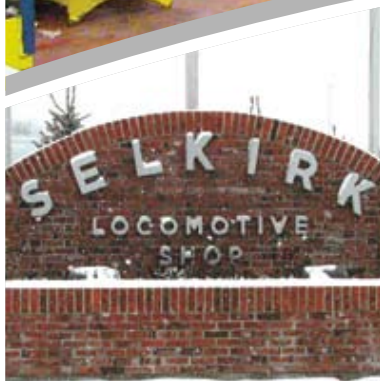

CSX LOCOMOTIVE SHOP

Selkirk, New York

BENEFIT:

65% Energy Savings

CSX, the nation's largest freight railroad, determined that a lighting upgrade in their locomotive shop would help boost profits and keep trains running on time by improving the maintenance area. To properly punch light down from the 46' mounting height, a system with very precise optics was needed. CSX was surprised when Westinghouse presented a solution that replaced 1,000 watt metal halides with an 8-lamp T5 system. The new system reduced energy use by 65%, maintained foot candles from the existing 1,000 watt fixtures, and virtually eliminated the harsh glare from the old system.
